1. Introduction

1.1 Technologies used

Primary technologies used for this website are PHP, JavaScript, HTML and CSS with additional styling from bootstrap

1.2 Broad description of functionality

General functionality

- Dynamic menus, only showing users the links they are allowed to access.
- Protection from unauthorized access both on the frontend and on the backend.
- Changing the pages displayed without page refreshes via a native javascript router.
- If necessary javascript functions for routing are not available, standard page changing is employed instead.
- Frontend error handling.
- Success messages.
- Checks mentioned throughout the documentation are performed both on the frontend and the backend whenever possible

index.html

- Loads all boroughs with listings into a dropdown field.
- Pressing the search button redirects the user to the listings page, preselecting the borough selected from the dropdown field, if one is selected.

listings.html

- Allows for querying listings based on the text in their title, the borough that they are in as well as the building type of the listing
- Allows for sorting listings based on recency, price, and size in feet
- Displays listings according to the filters and sorting mentioned above
- Initially the title, description, size and price of the listings are displayed.
- On hover, the aforementioned data is superseded by additional information, that being the building type, borough and any rooms provided during listing creation of the listing.
- Listings can be added to favorites by pressing the heart outline icon present on all non-favorite listings, only logged in users can add listings to favorites.
- Listings can be removed from favorites by pressing the heart icon present on all favorite listings.
- Users can open the listing page of the listing they'd like by pressing the read more button present on all listings.
- Users' sort and filter selections are saved upon every search

favorites.html

- Displays all listings previously added to favorites.
- The listings are displayed in the same format as in listings.html.

listing.html

- Displays complete information about a given listing based on URL search parameters.

- Users can click on the borough/building type of the listing and be taken back to listings.html with the borough/building type clicked on applied as the appropriate filter.
- Users can click on the copy phone number button to copy the phone number of the agency into their clipboard (the phone number is universal and not specific to the listing, loaded from a PHP file)
- Shows appropriate message if the listing does not exist or is no longer active.

survey.html

- Allows logged in users to answer well formatted questions provided by the website admins.
- Removes question from view once it is answered.
- Only shows currently active questions/answers.
- Questions have at least two active answers each at all times.

contact.html

- Allows logged in users to send messages to the website admins.
- Users must define the title of the message, between two and five words, before submitting their message.
- Users must choose from message types defined by the admins before submitting their message.
- Users must define the body of the message, between three and fifteen words, before submitting their message.

admin.html

- Allows website admins broad control over all dynamically displayed items on the website, including inserting, editing, deleting, soft deleting and restoring items.
- Allows website admins to view messages submitted by other users.
- Allows website admins to view page visits, page visit statistics, the number of page visits in the last 24 hours and the number of users who logged in in the last 24 hours.
- Allows website admins to view answer statistics of questions, current and previous ones.

register.html

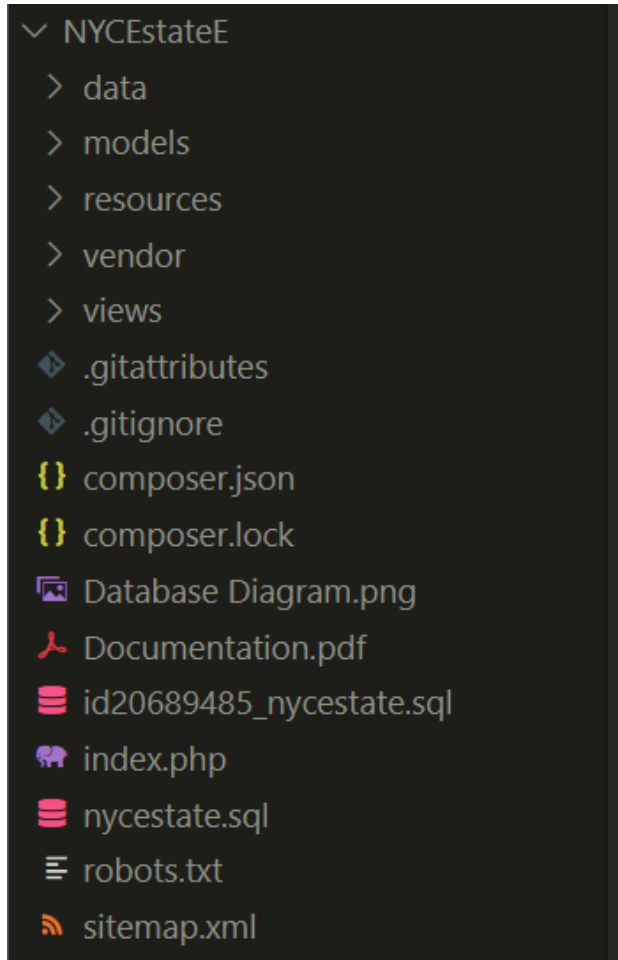

- Allows users to register to the website, allowing greater use.
- Guarantees strong user passwords with modern regex checks.
- Informs the user if the email they are trying to register with is already taken.
- Sends confirmation email to users on successful registration.
- All passwords are stored in a hashed and salted format.

login.html

- Allows users who have previously registered at register.html to log in with the appropriate credentials.
- Does not allow access for users whose accounts have been deleted, locked or banned.
- Locks user accounts upon three failed login attempts within five minutes.
- Sends reactivation emails to users who's accounts get locked.

2. Organizational structure

2.1 Organizational diagram

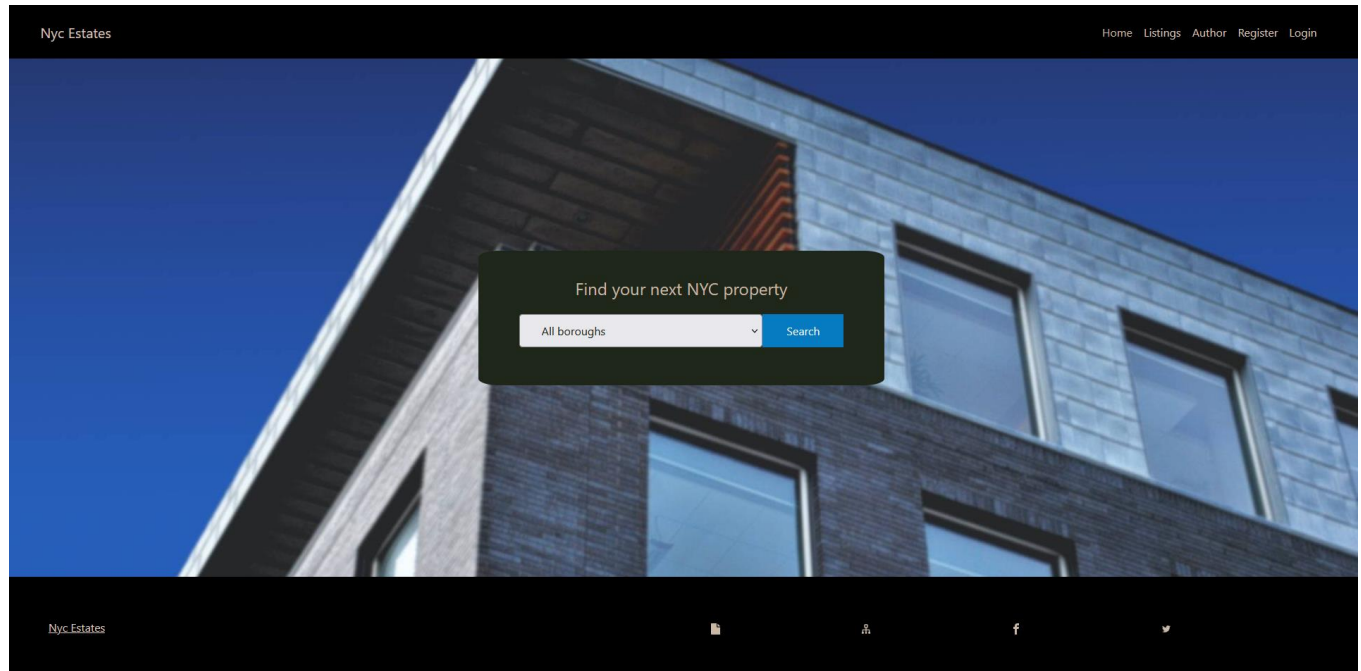

- connection.php and emailSetup.php are located outside of the root of the website for better security.
- /views/pages contains all .html pages.
- /views/fixed contains all files that are always included in index.php.
- /resources/imgs contains all images.
- /resources/js contains the javascript used on the website.
- /resources/css contains the css used on the website.
- /data contains all txt files used for logging
- /models contains model-specific folders that contain API endpoints consumed by the frontend.
- /models/functions contains functions that the API endpoints use.
- /vendor includes composer and PHPMailer dependencies
- The database diagram as well as the databases visible in the screenshot above are only available locally.

2.2 Sitemap

```
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
  <url>
    <loc>https://nycestate.000webhostapp.com/</loc>
    <lastmod>02-06-2023</lastmod>
    <changefreq>daily</changefreq>
    <priority>1</priority>
  </url>
</urlset>
```

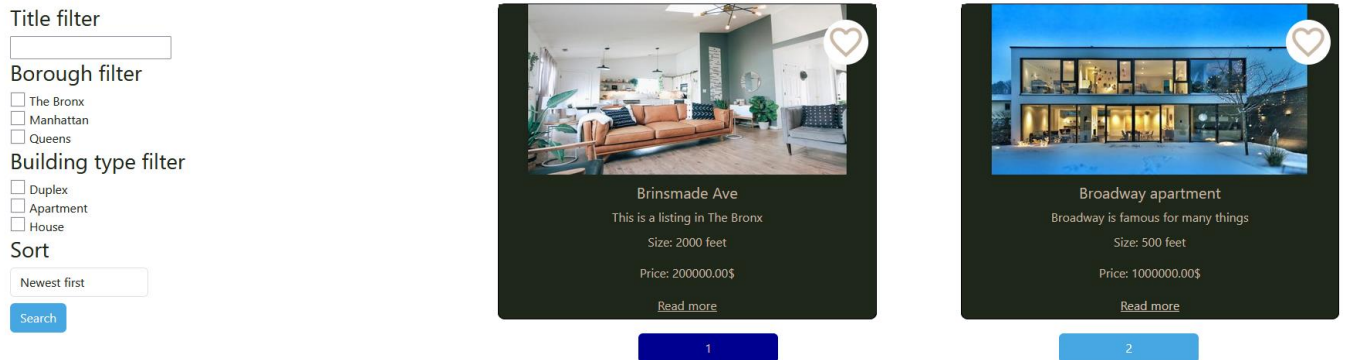

2.3 Images of pages and descriptions of functionality

2.3.1 index.html

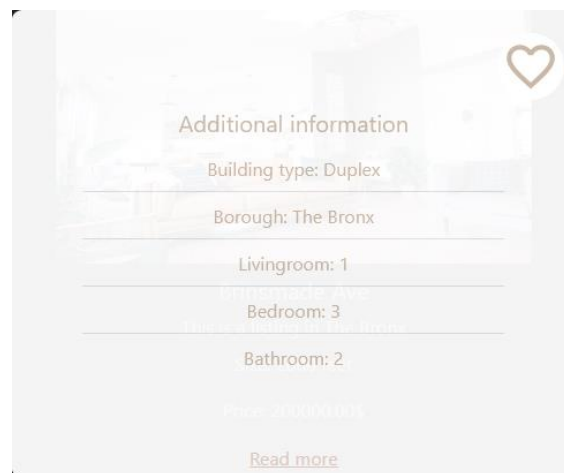

- The landing page of the website
- Allows for immediate searching and querying of listings by taking the user to the listings page with the borough they selected

2.3.2 listings.html

- Allows for searching and previewing of listings based on the filters selected by the user.
- Allows logged in users to add and remove listings from their favorites.
- Only boroughs and building types with active listings are shown.
- The image displayed is a resized thumbnail version of the image uploaded, a higher resolution version of the image is displayed on the page of the listing
- Users are displayed two listings at a time, pagination buttons are dynamically generated based on the current page and the last page available for the search filters applied
- Users can sort listings by recency, price, and size in feet.

- Pictured above is additional information provided to the user when a listing is hovered, note that the read more and favorite buttons are still interactable.

2.3.3 favorites.html

Your favorite listings

Brinsmade Ave

This is a listing in The Bronx

Size: 2000 feet

Price: 200000.00\$

[Read more](#)

1

Broadway apartment

Broadway is famous for many things

Size: 500 feet

Price: 1000000.00\$

[Read more](#)

2

- Allows the user to preview listings previously added to favorites.
- The same thumbnail version of the listing image is used as mentioned in listings.html

2.3.4 listing.html

Broadway apartment

Broadway is famous for many things

Borough: Manhattan
Building type: Apartment
Size: 500 feet

Rooms:

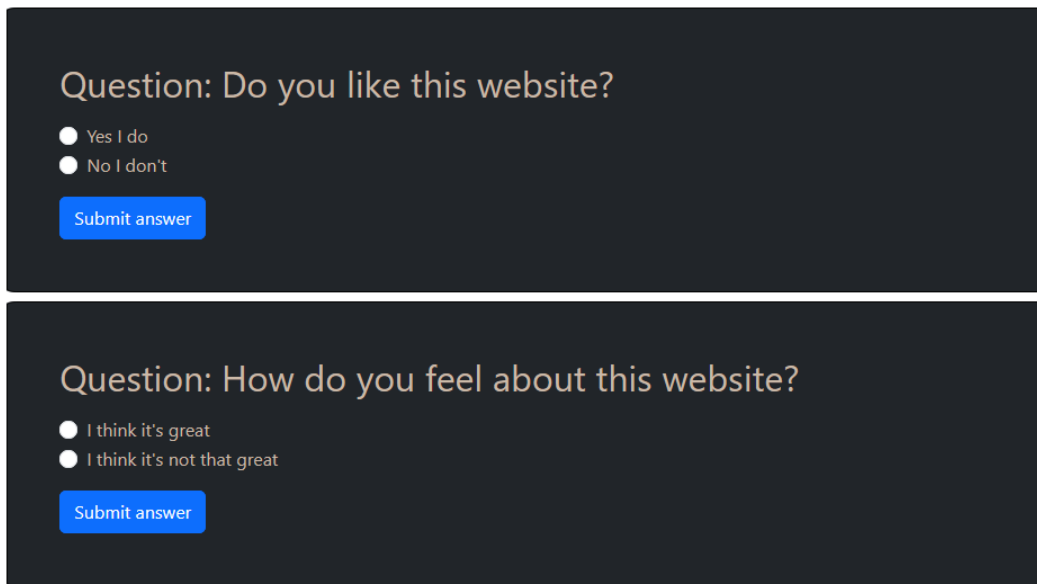

Livingroom: 2 Bedroom: 2 Bathroom: 1

Price: 1000000.00\$

[Copy phone number](#)

- Displays a higher resolution version of the image uploaded upon listing creation (compared to listings.html and favorites.html).
- Allows the user to obtain all information available about the select listing.
- Allows the user to search other listings in the borough of the given listing.
- Allows the user to search other listings of the same building type as the given listing.
- Allows the user to copy the phone number of the agency, the phone number is universal and not specific to the listing.
- Allows the user to add/remove the listing from their favorites.
- Shows appropriate message in case the listing does not exist or is no longer active.

2.3.5 survey.html

The image displays two separate survey question cards, each with a dark background and light-colored text. The first card asks 'Question: Do you like this website?' and provides two radio button options: 'Yes I do' and 'No I don't'. The second card asks 'Question: How do you feel about this website?' and provides two radio button options: 'I think it's great' and 'I think it's not that great'. Both cards feature a blue 'Submit answer' button at the bottom.

Question: Do you like this website?

☐ Yes I do

☐ No I don't

Submit answer

Question: How do you feel about this website?

☐ I think it's great

☐ I think it's not that great

Submit answer

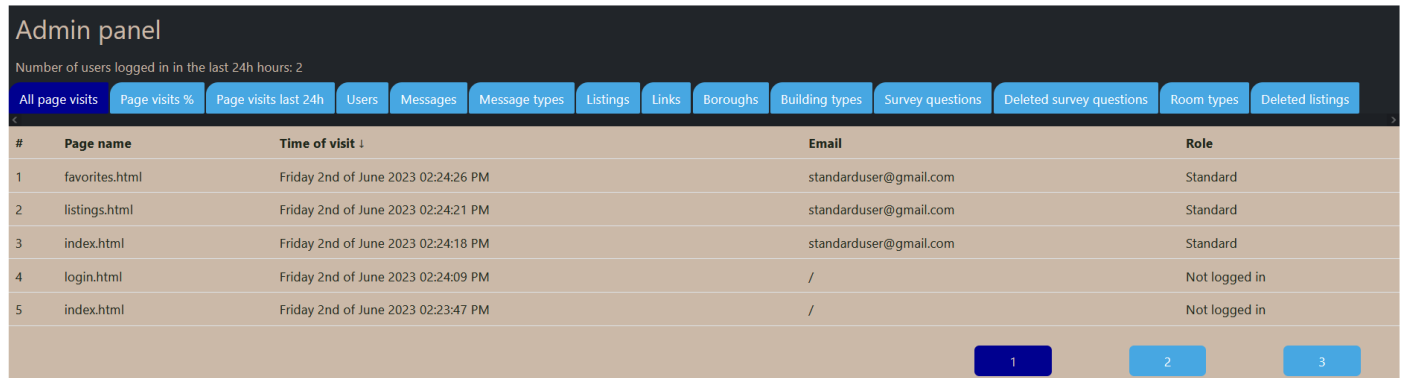

- Allows logged in users of the website to give input to the admins by responding to questions defined by said admins in the admin panel with answers predefined by the admins.
- Users are only shown questions they have yet to respond to.
- Upon answering a question, it is removed from the user's view and a query is made to check for new questions or changes to existing ones

2.3.6 contact.html

A screenshot of a contact form on a dark background. The form consists of three white input fields stacked vertically. The first field is labeled 'Message title' and contains a single line of text. The second field is labeled 'Message type' and contains the text 'Select a message type'. The third field is labeled 'Message body' and contains multiple lines of text. Below the input fields is a blue button with the word 'Submit' in white text.

- Allows logged in users to send messages to the website admins.
- Users must define the title of the message, between two and five words, before submitting their message.
- Users must choose from message types defined by the admins before submitting their message.
- Users must define the body of the message, between three and fifteen words, before submitting their message.

2.3.7 admin.html

The screenshot shows the 'Admin panel' interface. At the top, there's a header with the title 'Admin panel' and a subtitle 'Number of users logged in in the last 24h hours: 2'. Below this is a row of navigation tabs: 'All page visits', 'Page visits %', 'Page visits last 24h', 'Users', 'Messages', 'Message types', 'Listings', 'Links', 'Boroughs', 'Building types', 'Survey questions', 'Deleted survey questions', 'Room types', and 'Deleted listings'. The 'All page visits' tab is currently selected. Below the tabs is a table with the following columns: '#', 'Page name', 'Time of visit', 'Email', and 'Role'. The table contains five rows of data, all from 'Friday 2nd of June 2023'. The first three rows show visits to 'favorites.html', 'listings.html', and 'index.html' by 'standarduser@gmail.com' with a 'Standard' role. The last two rows show visits to 'login.html' and 'index.html' with a role of 'Not logged in' and an email of '/'. At the bottom right of the table, there are three buttons labeled '1', '2', and '3'.

#	Page name	Time of visit	Email	Role
1	favorites.html	Friday 2nd of June 2023 02:24:26 PM	standarduser@gmail.com	Standard
2	listings.html	Friday 2nd of June 2023 02:24:21 PM	standarduser@gmail.com	Standard
3	index.html	Friday 2nd of June 2023 02:24:18 PM	standarduser@gmail.com	Standard
4	login.html	Friday 2nd of June 2023 02:24:09 PM	/	Not logged in
5	index.html	Friday 2nd of June 2023 02:23:47 PM	/	Not logged in

- Pictured above is one of the many tabs of the admin panel, each granting the website admins great control over the content on the website.
- The pictured tab allows website admins to see the most recent page visits.
- Admin tabs that are sortable have default sorting modes.
- Admins can change the sort mode by clicking on clickable table headers.
- The header currently used for sorting is represented either with a down arrow for descending or an up arrow for ascending
- Admins can edit user accounts, message types, listings, links, boroughs, building types, survey questions, deleted survey questions, room types and deleted listings
- Admins can soft delete listings, questions and question answers
- Admins can restore deleted listings and questions
- Admins can ban users
- Admins can delete users, messages, links, boroughs, building types and room types
- Admins can only delete the boroughs, building types and room types that are not referenced in listings
- Admins can create new message types, listings, links, boroughs, building types, survey questions and room types
- Admins can view the responses to the questions (both active and inactive questions as well as active and inactive answers to those questions).
- Admins can view individual page visits, page popularity as a percentage, the sum of page visits per page in the last 24 hours as well as the number of users who logged in in the last 24 hours
- Any change made is immediately represented.
- New boroughs, building types, and room types are immediately available to admins for listing creation and editing.

2.3.8 register.html

Email address

We'll never share your email with anyone.

Name

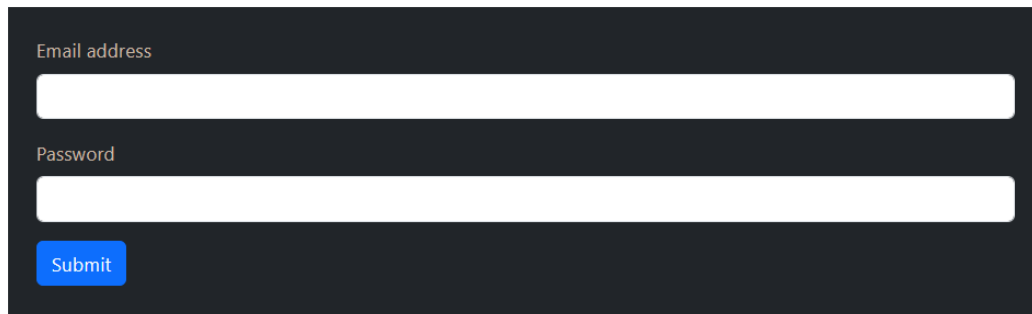

Last name

Password

Submit

- Allows users to register to the website, allowing greater use.
- Guarantees strong user passwords with modern regex checks.
- Informs the user if the email they are trying to register with is already taken.
- Sends confirmation email to users on successful registration.
- All passwords are stored in a hashed and salted format.

2.3.9 login.html

A login form with a dark background. It contains two white input fields. The first field is labeled "Email address" in a small, light gray font. The second field is labeled "Password" in a small, light gray font. Below the password field is a blue button with the word "Submit" in white text.

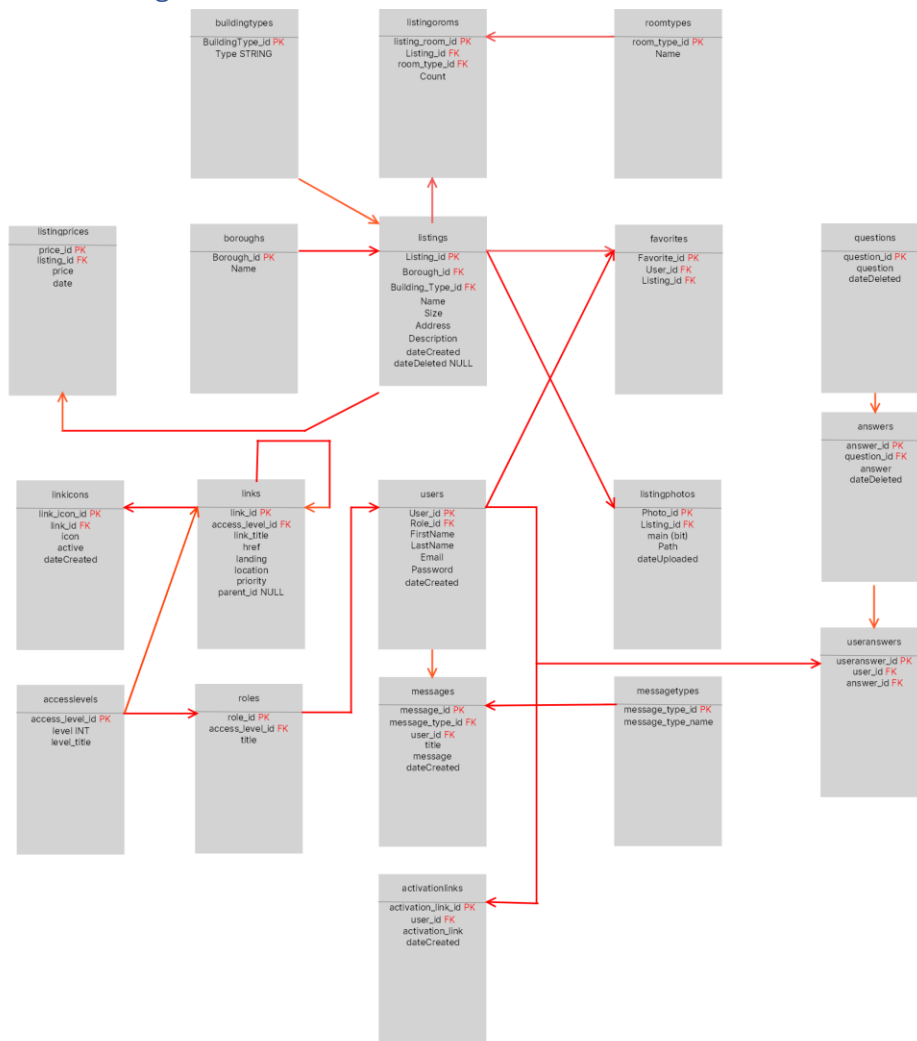

Email address

Password

Submit

- Allows users who have previously registered at register.html to log in with the appropriate credentials.
- Does not allow access for users whose accounts have been deleted, locked or banned.
- Locks user accounts upon three failed login attempts within five minutes.
- Sends reactivation emails to users who's accounts get locked.

2.4 Database Diagram

3. Code

3.1 PHP

3.1.1 models/functions/

3.1.1.1 accessLevelFunctions.php

```
<?php
function getAllAccessLevels(){
    include ("../../../connection.php");

    $statement = "SELECT access_level_id AS id, level_title as title FROM
accesslevels ORDER BY level";
    $prepSt = $conn->prepare($statement);

    $prepSt->execute();

    return $prepSt->fetchAll();
}
?>
```

3.1.1.2 activityFunctions.php

```
<?php
